

Mud tank before & after cleaning

Mud tank before & after cleaning

Cleaning Result

Before cleaning: Barite build up

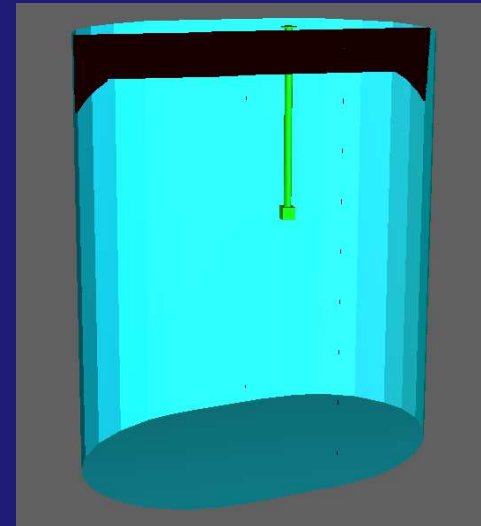

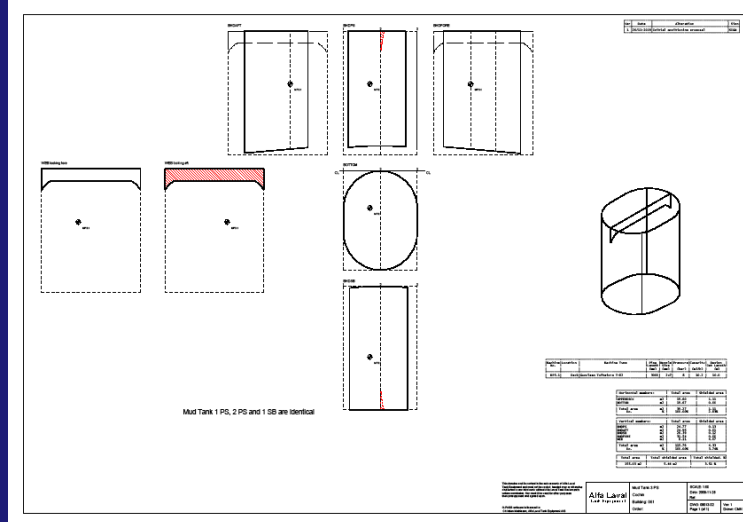

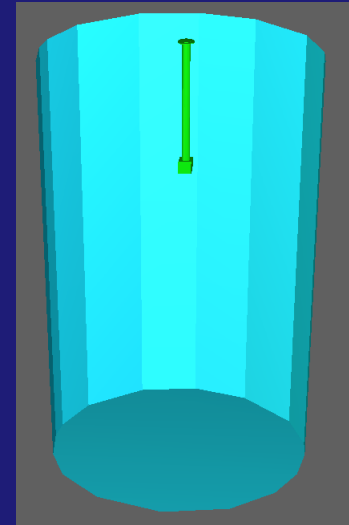

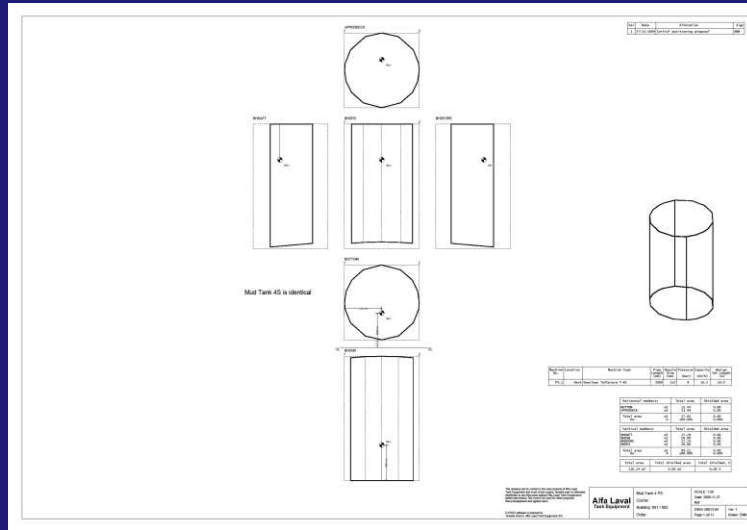

After cleaning: Barite build removed automatically

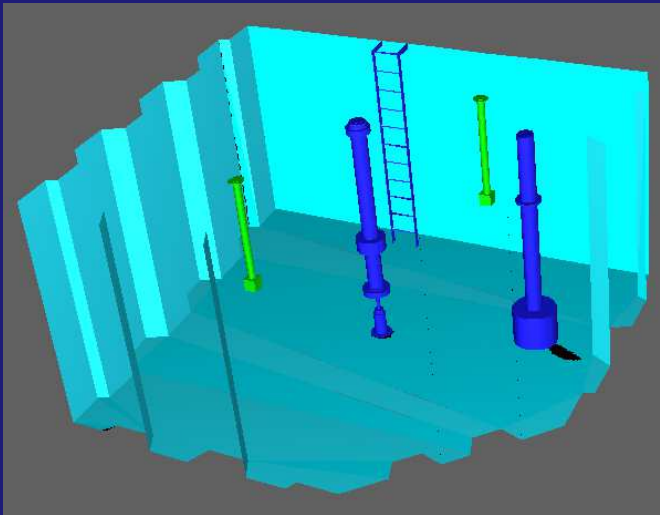

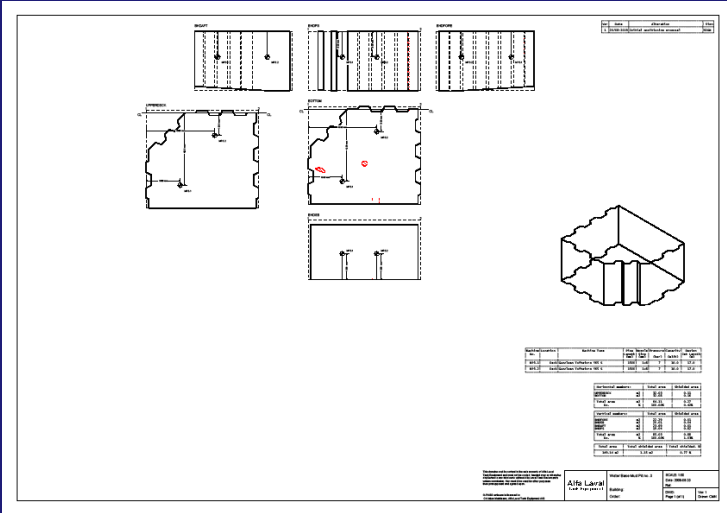

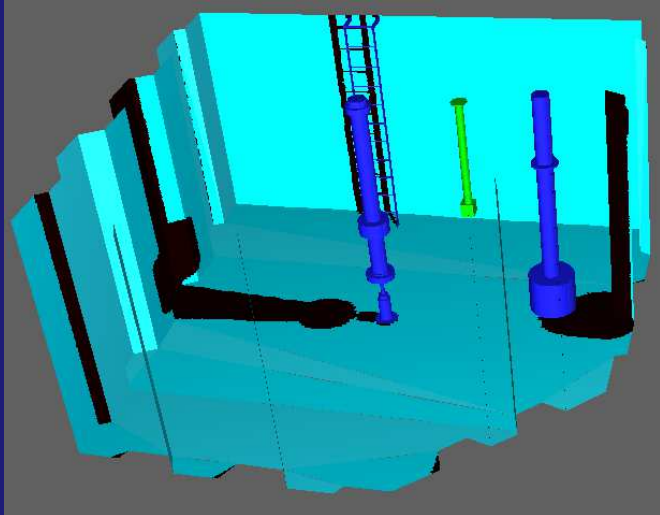

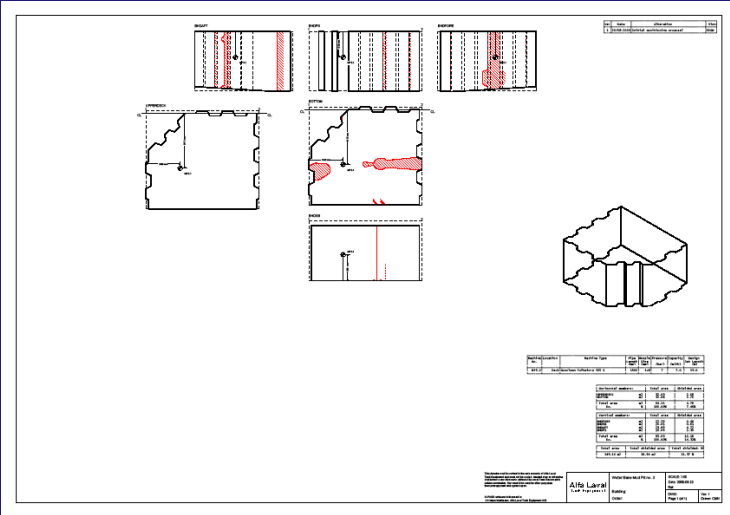

Benefits

- Eliminated man entry to the Mud tanks, ensure that personnel accidents are avoided.
- Automated tank cleaning systems ensures the same high cleaning result with less cleaning slop
- Reduced cleaning slops, which reduces the slop handling costs
- Cleaning time is reduced. This increases production time and turnover.

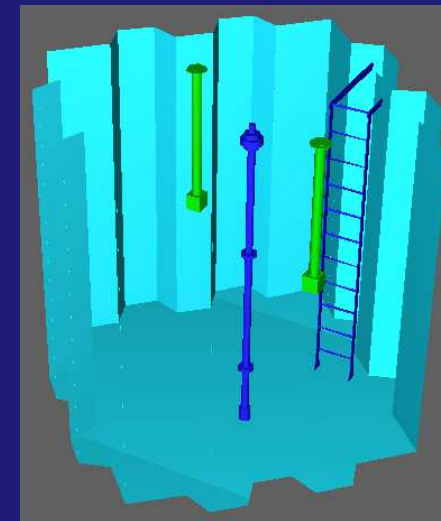

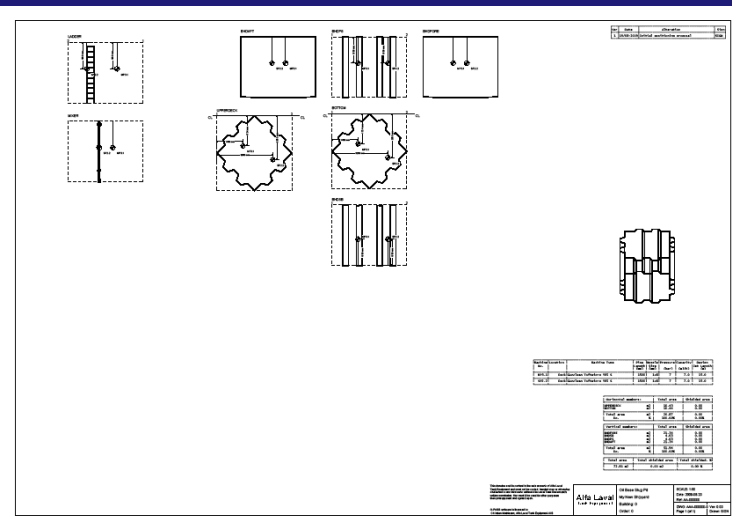

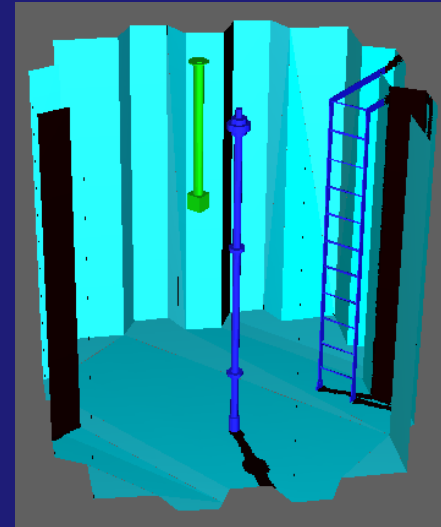

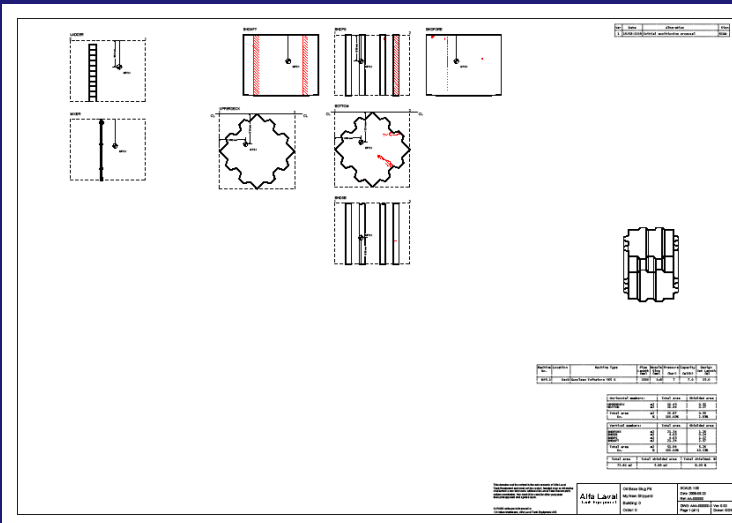

Cleaning Requirements

Questionnaire

What does Alfa Laval need to know to size the system?

- Quantity, size and shape of pits (drawing if possible)
- Pipe work, agitators and other obstructions in the pit
- Accessibility for mounting of TCM
- Water pressure / suction available?
- Is there a decanter on the rig that can be utilized for re-circulation of washing water
