

Tank Cleaning Technologies a division of

inTank Technologies Limited

It's business as usual

There is still confusion surrounding the Coronavirus and what it means for our customers. Here at inTank Technologies we are doing everything we can to support our customers during these challenging times.

The food and beverage industries have seen a huge increase in demand whilst other industries have reduced their production.

Over the last few weeks, we have seen an increase in customers returning their cleaning heads for service/repair. This has been possible within industries where production has been reduced and customers have made the decision during down-time to service their process equipment.

What steps have been taken by inTank Technologies to ensure business as usual.

- Considerably increased stock levels to ensure availability of products.
- Increased levels of spare parts to avoid unnecessary production downtime.
- Rotating Engineers shift patterns to ensure safe working conditions for our Engineers, whilst ensuring a reliable repair service is maintained.
- Office based staff working shift patterns between the hours of 8.30am – 6pm to support customers, whilst working in a safe and control environment.

Supporting the Food, Pharmaceutical, Personal Care, Beverage and Distilling industry is essential during these unprecedented times. It is important for these industries to have the confidence that the support from suppliers is available. inTank Technologies are committed to providing business as usual to our customers with no delays in support or supply.
